

INFORMED SEARCH

Today

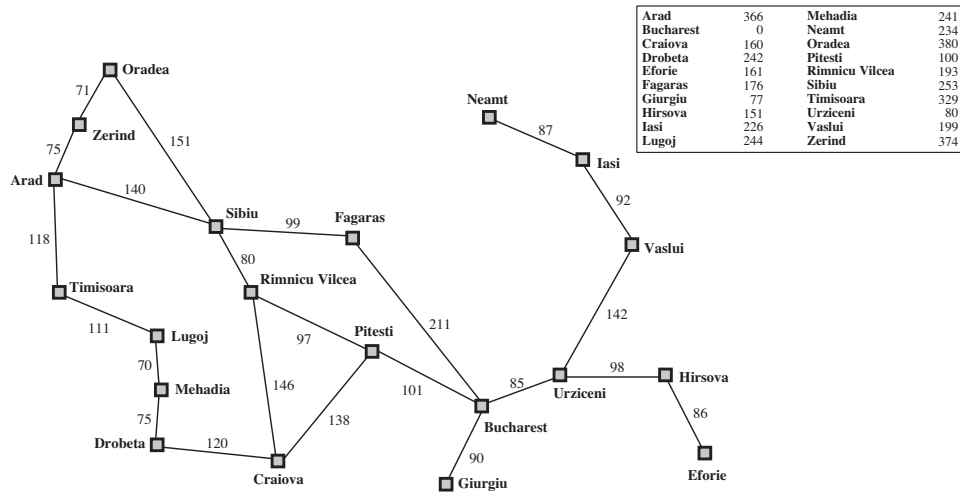

- Today
 - What is informed search?
 - A* search algorithm
 - Generating heuristics

Informed Search

A* search

- Developed in 1968 by Hart et al. as a principled framework for using heuristic information to find minimum cost paths
- Uses GraphSearch algorithm
- Frontier ordered by $f(n) = g(n) + h(n)$
- Must do goal test after popping off frontier
- Must include additional else-if statement

A* search example

A* search example

A* search: conditions for optimality

Properties of A* search

- A* expands
 - ▣ all nodes with $f(n) < C^*$
 - ▣ some nodes with $f(n) = C^*$
 - ▣ no nodes with $f(n) > C^*$
- Optimally efficient
- Complete if finite number of nodes with $f(n) \leq C^*$

Creating heuristic functions

- J. Pearl, “On the discovery and generation of certain heuristics”, 1983.
- Solve relaxed versions of the problem

Creating heuristic functions

- A tile can move from square A to square B if
 - ▣ Rule 1: A is horizontally or vertically adjacent to B
 - ▣ Rule 2: B is blank

Creating heuristic functions

| | | |
|---|---|---|
| 1 | 2 | 3 |
| 8 | ■ | 4 |
| 7 | 6 | 5 |

Goal

| | | | | | | | | | | | |
|---|--------------------|-------------------------------|---|---|---|---|---|---|---|----------|----------|
| <table border="1"> <tr><td>2</td><td>8</td><td>3</td></tr> <tr><td>1</td><td>6</td><td>4</td></tr> <tr><td>■</td><td>7</td><td>5</td></tr> </table> | 2 | 8 | 3 | 1 | 6 | 4 | ■ | 7 | 5 | 5 | 6 |
| 2 | 8 | 3 | | | | | | | | | |
| 1 | 6 | 4 | | | | | | | | | |
| ■ | 7 | 5 | | | | | | | | | |
| <table border="1"> <tr><td>2</td><td>8</td><td>3</td></tr> <tr><td>1</td><td>■</td><td>4</td></tr> <tr><td>7</td><td>6</td><td>5</td></tr> </table> | 2 | 8 | 3 | 1 | ■ | 4 | 7 | 6 | 5 | 3 | 4 |
| 2 | 8 | 3 | | | | | | | | | |
| 1 | ■ | 4 | | | | | | | | | |
| 7 | 6 | 5 | | | | | | | | | |
| <table border="1"> <tr><td>2</td><td>8</td><td>3</td></tr> <tr><td>1</td><td>6</td><td>4</td></tr> <tr><td>7</td><td>5</td><td>■</td></tr> </table> | 2 | 8 | 3 | 1 | 6 | 4 | 7 | 5 | ■ | 5 | 6 |
| 2 | 8 | 3 | | | | | | | | | |
| 1 | 6 | 4 | | | | | | | | | |
| 7 | 5 | ■ | | | | | | | | | |
| | Tiles out of place | Sum of distances out of place | | | | | | | | | |

Creating heuristic functions

| | Number nodes expanded for solution depth d | | |
|------------|--|-------|-------------|
| | d = 4 | d = 8 | d = 12 |
| IDS | 112 | 6384 | 3.6 million |
| $A^*(h_1)$ | 13 | 39 | 227 |
| $A^*(h_2)$ | 12 | 25 | 73 |

Creating heuristic functions

- Some heuristics are better than others
 - If $h_1(n) \leq h_2(n) \leq h^*(n)$ then h_2 **dominates** h_1
 - Manhattan distance dominates tiles out of place
 - A-star search using h_2 will never expand more nodes than A-star search using h_1
 - Can combine admissible heuristics using max

Informed search summary

- Uses additional information to guide search process
 - Greedy best-first uses estimate of cost to goal
 - A* uses both cost from start + estimate to goal
 - A* is optimal with admissible/consistent heuristic
- A good heuristic is the key!
 - Consider solutions to relaxed problems

Homework 2

- Have all you need to get started!
- You can use whichever heuristic you want.
- Determining if a puzzle can be solved:

parity(number of inversions + row dist. of blank tile)
