I affirm this work abides by the university's Academic Honesty Policy.

## Print Name, then Sign

- First due date Thursday, September 30
- Turn in your work on a separate sheet of paper with this page stapled in front.
- Do not include scratch work in your submission.
- There is to be no collaboration on any aspect of developing and presenting your proof. Your only resources are: you, the course textbook, me, and pertinent discussions that occur during class.
- Follow the Writing Guidelines of the Grading Rubric in the course information sheet.
- Retry: Only use material from the relevant section of the text or earlier.
- Retry: Start over using a new sheet of paper.
- Retry: Restaple with new attempts first and this page on top.
"Obvious" is the most dangerous word in mathematics." - Eric Temple Bell
V-1 (Section LDS) Extend Theorem DLDS by proving the following theorem.

1. Theorem 1 DLDSPV (Dependency in Linearly Dependent Sets, Previous Vectors) Suppose that $S=\left\{\mathbf{u}_{1}, \mathbf{u}_{2}, \mathbf{u}_{3}, \ldots, \mathbf{u}_{n}\right\}$ is an ordered set of non-zero vectors. Then $S$ is a linearly dependent set if and only if (without changing the order of the vectors) there is an index $t, 1 \leq t \leq n$ such that $\mathbf{u}_{t}$ equals a linear combination of the vectors $\mathbf{u}_{1}, \mathbf{u}_{2}, \mathbf{u}_{3}, \ldots, \mathbf{u}_{t-1}$ which have subscripts smaller than $t$.

Note that Theorem DLDS in the text does not require the set $S$ to be written in order and that Theorem DLDSPV requires the vectors be written in order and that you may not change that order.
