CSCI 455: Principles of Database Systems

Course Syllabus – Fall 2018

Instructor: David Chiu
Office: Thompson Hall 390b
Email: dchiu@pugetsound.edu
Phone: (253) 879.2853
Office Hours: TBD, open door or by appointment

Meeting Times: MWF 3:00 – 3:50 in TH 409
Course Page: http://cs.pugetsound.edu/~dchiu/cs455
Slack: https://univpugetsound.slack.com (sign up with your pugetsound.edu address)

1 Course Information

The management of data is one of the classical problems in computing. This course centers around the fundamental concepts and theory behind the relational data model, which addresses numerous problems that plague data management, including data independence, access, consistency, and information loss. Course topics include the relational data model, database languages (e.g., SQL), relational database theory, database design (by decomposition), query execution, and considerations that affect system performance. Students will design database schemas that effectively model an organization's information and write applications that require database integration. Students will also gain insight through the implementation of influential data structures and algorithms that are commonly used in modern relational database systems.

Prerequisites

Junior standing, and a grade of C- and above in the following courses are required or with permission from the instructor:

- CSCI 261 - Computer Science II
- MATH 210 - Introduction to the Mathematics of Computer Science

Textbook

- Silberschatz, Korth, and Sudarshan, Database System Concepts. 6th Ed. (Required)

Course Topics

- The Relational Model
- Database Languages: Relational Algebra and SQL
- Relational Database Theory and Normalization
- File Organization
- Hashing and Indexing
- Query Execution
2 Student Learning Outcomes

Students taking this course will:

- Analyze user requirements to prepare an appropriate relational database schema.
- Use normal forms and perform normalization in the design and of a relational database.
- Analyze and solve problems related to external memory data structures and algorithms using suitable mathematics.
- Evaluate the merits among various file organization and indexing designs, with respect to space and time complexity.
- Design, code, test and debug programs which perform query and update transactions on a database in a team-based environment.

3 Grading

The following grade cutoffs are upper bounds. They might come down, but will not be set higher: A = 95, A- = 90, B+ = 87, B = 83, B- = 80, C+ = 77, C = 73, C- = 70, D+ = 67, D = 64, D- = 60, F = < 60. Your overall grade will be composed as follows:

<table>
<thead>
<tr>
<th>Assignment</th>
<th>% Weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>Discretionary</td>
<td>3</td>
</tr>
<tr>
<td>Homework</td>
<td>32</td>
</tr>
<tr>
<td>Project</td>
<td>20</td>
</tr>
<tr>
<td>Midterm I</td>
<td>13</td>
</tr>
<tr>
<td>Midterm II</td>
<td>15</td>
</tr>
<tr>
<td>Final Exam</td>
<td>17</td>
</tr>
</tbody>
</table>

Table 1: Breakdown of Grades

Assignments

- **Homework Assignments (Work Alone!)** – You will be using Java to incrementally building a relational database system, DavidDB (the finest database system in the common era). There will be roughly 6-7 assignments that focus on system-building, as well as a significant assignment written in SQL.

You must work alone on all homework assignments. Collaboration among students is encouraged for problem interpretation, brainstorming, etc., but in general, I expect every student to submit their own work. **Do not help write or share each other's answers or code!** Code duplications are extremely easy to catch, and the penalty for cheating is severe: course failure and a permanent record on your transcript.

- **Team Projects** – There will be four projects, starting with basic SQL usage to building a robust database-driven website. Project descriptions can be downloaded from the course page.

- **Late Work** – For each day either a homework or project assignment is late (includes weekends), a 10% deduction will be assessed, and no late work will be accepted one week after the due date.
Exams

There will be two midterms and a final exam, accounting for 13%, 17%, and 20% of your overall grade, respectively. They will cover topics discussed in the lectures, readings from the assigned textbook, and assignments. The exams are cumulative. Study guides are provided and always reviewed on the lecture immediately preceding the day of the exam.

Discretionary

Discretionary points will be given based on your...

- Attendance
- Class participation
- Turning in all assignments on time
- Refrain from activities that can disrupt others, e.g., texting, playing games on your laptop, etc.

4 Policies

Class Disruptions

I understand the student's need to have their phone on them to answer the occasional important call. I do ask that you please have your phones on vibrate and take the call outside the classroom out of respect for your fellow students.

Academic Integrity

You should be aware of the Student Integrity Code at the university. Any suspected cheating (e.g., plagiarizing code, copying homework solutions, etc.) will be reported to the Registrar, which may result in possible suspension/expulsion. See this link for more info:

Student Accessibility and Accommodation

If you have a physical, psychological, medical or learning disability that may impact your course work, please contact Peggy Perno, Director of the Office of Accessibility and Accommodation, 105 Howarth, 253.879.3395. She will determine with you what accommodations are necessary and appropriate. All information and documentation is confidential.

Classroom Emergency Response Guidance

Please review university emergency preparedness and response procedures posted at . There is a link on the university home page. Familiarize yourself with hall exit doors and the designated gathering area for your class and laboratory buildings.

If building evacuation becomes necessary (e.g. earthquake), meet your instructor at the designated gathering area so she/he can account for your presence. Then wait for further instructions. Do not return to the building or classroom until advised by a university emergency response representative.

If confronted by an act of violence, be prepared to make quick decisions to protect your safety. Flee the area by running away from the source of danger if you can safely do so. If this is not possible, shelter in
place by securing classroom or lab doors and windows, closing blinds, and turning off room lights. Lie on the floor out of sight and away from windows and doors. Place cell phones or pagers on vibrate so that you can receive messages quietly. Wait for further instructions.

**Student Bereavement Policy**

The University of Puget Sound recognizes that a time of bereavement can be difficult for a student. Therefore, the university provides a Student Bereavement Policy for students facing the loss of a family member. Students are normally eligible for, and faculty members are expected to grant, three consecutive weekdays of excused absences, without penalty, for the death of a family member, including parent, grandparent, sibling, or persons living in the same household. Should the student feel that additional days are necessary, the student must request additional bereavement leave from the Dean of Students or the Dean’s designee. In the event of the death of another family member or friend not explicitly included within this policy, a bereaved student may petition for grief absence through the Dean of Students office for approval.

### 5 Course Schedule

The following course schedule is tentative and subject to change.

<table>
<thead>
<tr>
<th>Week</th>
<th>Topics</th>
<th>Reading</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>The relational model, set operations</td>
<td>Silberschatz, et al.: Chap 1</td>
</tr>
<tr>
<td>2</td>
<td>Relational model (cont.), start relational algebra</td>
<td>Silberschatz, et al.: Chap 2</td>
</tr>
<tr>
<td>3</td>
<td>Relational algebra</td>
<td>Silberschatz, et al.: Chap 6.1</td>
</tr>
<tr>
<td>4</td>
<td>SQL: data definition, integrity constraints</td>
<td>Silberschatz, et al.: Chap 3</td>
</tr>
<tr>
<td>5</td>
<td>SQL: data manipulation</td>
<td>—</td>
</tr>
<tr>
<td>6</td>
<td>Review and Midterm I</td>
<td>Silberschatz, et al.: Chap 8</td>
</tr>
<tr>
<td>7</td>
<td>Relational database theory and design</td>
<td>Silberschatz, et al.: Chap 8</td>
</tr>
<tr>
<td>8</td>
<td>Theory and design (cont.)</td>
<td>Silberschatz, et al.: Chap 8</td>
</tr>
<tr>
<td>9</td>
<td>Access patterns and file organization</td>
<td>Silberschatz, et al.: Chap 10.1 - 10.6</td>
</tr>
<tr>
<td>10</td>
<td>Indexing</td>
<td>Silberschatz, et al.: Chap 11</td>
</tr>
<tr>
<td>11</td>
<td>Review and Midterm II</td>
<td>—</td>
</tr>
<tr>
<td>12</td>
<td>Indexing (cont.); Hashing</td>
<td>Silberschatz, et al.: Chap 11</td>
</tr>
<tr>
<td>13</td>
<td>Thanksgiving Break;</td>
<td>—</td>
</tr>
<tr>
<td>14</td>
<td>Query execution</td>
<td>Silberschatz, et al.: Chap 12</td>
</tr>
<tr>
<td>15</td>
<td>Review and reading period</td>
<td>—</td>
</tr>
